

HUGE SOLAR FLARE TODAY
May 12, 2013

By Michael Erlewine (Michael@Erlewine.net)

Another huge solar flare at 1:05 PM EDT today, even larger than yesterdays, an X-Class flare measuring X2.8 and complete with a coronal mass ejection (CME) event, but not aimed at Earth. It caused a strong radio blackout on the sunlit side of Earth. I will try to have more details in the morning.
