

SOLAR CME EVENT HEADED TOWARD EARTH
May 12, 2012

By Michael Erlewine (Michael@Erlewine.net)

A small CME (coronal mass ejection) event erupted on the surface of the Sun on May 10, 2012 at 7:54 PM EDT and is headed toward Earth at 1000 km/s. It will, however, only have a glancing blow to the Earth's magnetic field sometime on May 13, 2012 around 10:30 PM EDT. It is also in the direction of Mars, Saturn, and Venus.
